

AZULLC®

INTRODUCING:

THE BYTE PLUS

Advanced technology that brings multi-purpose usability with ease and simplicity.

PRESS RELEASE

July 18, 2016

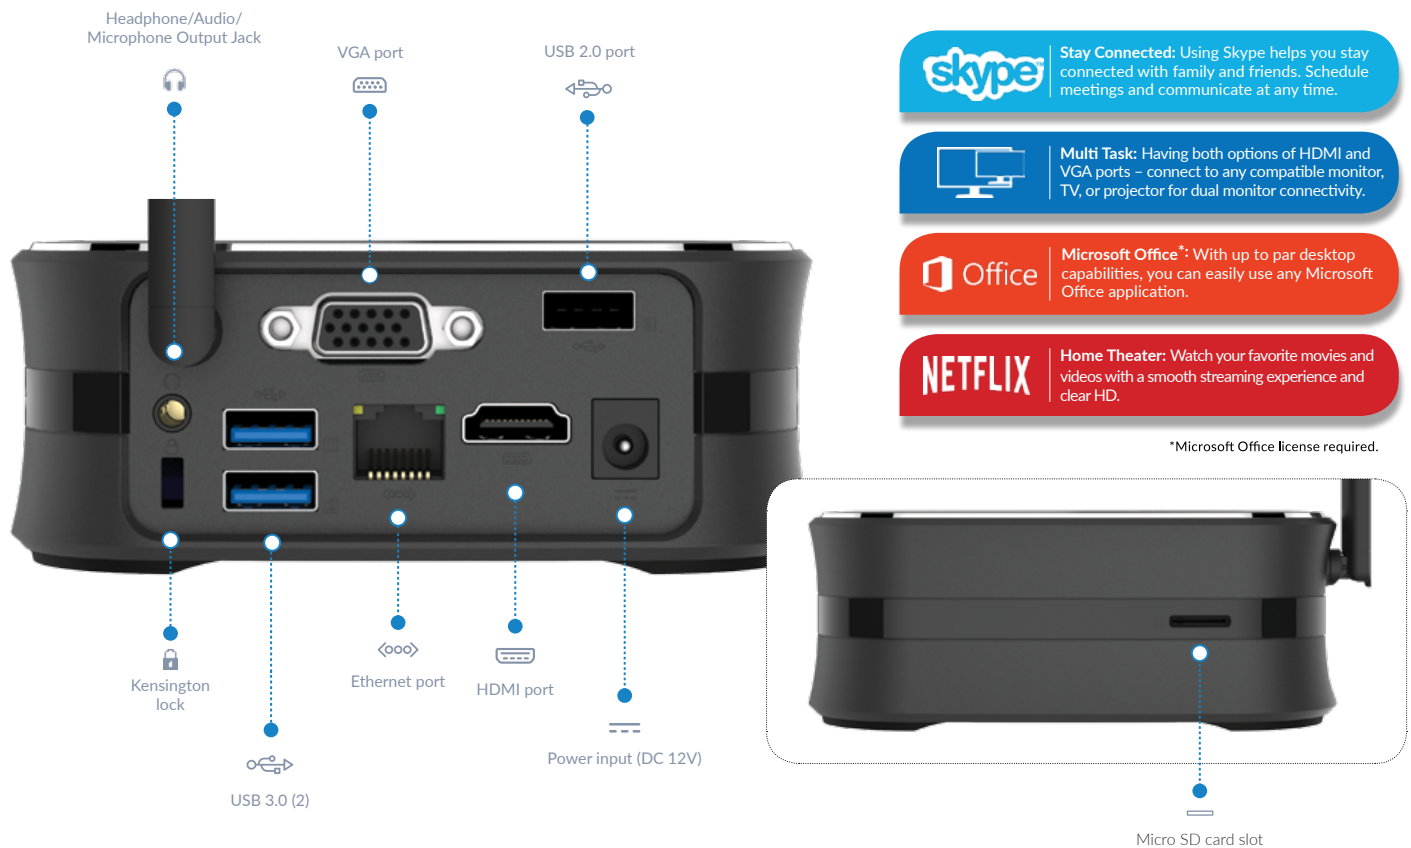

Azulle, a nationwide provider of consumer electronics, announced a new addition to their line of Windows® products –the Byte Plus (Windows® 10 Fanless Mini Desktop PC). Created for today's fast paced and multi-tasking lifestyle, the Byte Plus leads the Mini PC industry with multipurpose usability and additional functionality.

People from all corners of the world are constantly on the go. Azulle focuses on providing solutions to empower their day to day tasks. As people's time and work space becomes limited, their goals and objectives become bigger. With this in mind, Azulle introduces the Byte Plus, an attractive and highly effective Mini PC for business and pleasure that they can use at anytime and anywhere.

The Byte Plus

Windows® 10 Fanless Mini Desktop PC

The Byte Plus was made to replace the less attractive, bulky computer towers that repeatedly crowd office spaces and home environments. Components had to be arranged very carefully and precisely for convenience to the user. The Byte Plus adds to the mix with two 3.0 USB ports and one 2.0 USB port. The placements of the ports are designed to be convenient for the user as they can have easy access to the peripheral connections (cameras, printers, wireless mouse and keyboards or any other USB capable devices).

The HDMI along with the VGA port remain in the middle. A Micro SD card connector is integrated providing up to 128GB of storage for any application. Not to forget, the Byte Plus comes with an Ethernet port which allows you to plug in an Ethernet cable directly into your Mini PC for uninterrupted internet service.

In addition to the dual band wireless network adapter, The Byte Plus upgraded its processor from a BayTrail to a CherryTrail processor. What difference does that make? In a nutshell, the CherryTrail processor allows the user to install more software applications which allows them to use larger amounts of RAM without any workarounds, allocate more RAM to individual programs (particularly important for multitasking, games and other demanding applications), and employ more advanced low-level security features.

The Byte Plus

Windows® 10 Fanless Mini Desktop PC

The Azulle team continues to communicate and collaborate with people and use the feedback to better enhance their technology. In addition to Windows® 10, the Byte Plus will also be offered with a Linux operating system. This is an added benefit of having a 64-bit processor as Azulle continues to strive in providing more choices and flexibility.

PRODUCT SPECIFICATIONS

Processor	Intel® CherryTrail™ T3 Z8300 Quad-Core, 1.44 GHz (up to 1.84 GHz)
Storage	RAM 2GB DDR3L/32 GB of memory
Display	Output to 1080p 16:9 (wide screen)

The Byte Plus will officially release August 18, 2016. The mini PC will retail at \$170 and is available for pre-order now on Azulle's official website.

About Azulle

We are a U.S. based technology company that came together based on the principle that technology should be more accessible and fulfill the various needs of people. What started as a small group of individuals in 2013 with a single product is now becoming one of the fastest growing major PC companies in the world. How did we do that? We worked closely with our customers and learned about their day to day challenges and obstacles, which helped us in developing effective solutions that made technology simpler and easier to use. With the support and loyalty of our customers, Azulle continues to grow across all geographies and customer segments for mini PCs, PC sticks, and accessories.

Create - Enhance - Innovate... Technology Inspired by Real People.
